THE STAKES

# Transport emits a quarter of the world's fuel CO2

25%

Share of global CO2 from fuel combustion that came from transport in 2024

IEA, 2024

PROBLEM

# Road emissions keep climbing, up 8% since 2015

Road transport emitted just over 6 Gt of CO2 in 2024

IEA Breakthrough Agenda Report 2025, 2024

8%

Rise in road transport CO2 emissions from 2015 to 2024

# Electric cars now make up over a quarter of sales

## 20 million

Electric cars the IEA expects to be sold worldwide in 2025

IEA Global EV Outlook 2025, 2025

MOMENTUM

# Electric car demand is still accelerating

35%

Record first-quarter sales in all major markets

Year-on-year rise in global electric car sales in Q1 2025

IEA Global EV Outlook 2025, 2025

SOLUTION

# Tesla answers with electric vehicles and energy storage

Electric vehicles for the road

Energy storage deployments alongside them

# Tesla more than doubled its energy storage deployments in 2024

## 31.4 GWh

Up from 14.7 GWh in 2023

Energy storage deployed by Tesla in 2024

Tesla (SEC Exhibit 99.1, Q4 2024 update), 2024

TRACTION

# Tesla delivered more than 1.7 million vehicles in 2024

1,789,226

Vehicles Tesla delivered in 2024

Deliveries slipped 1% as competition intensified

Illustrative; Tesla (SEC Exhibit 99.1, Q4 2024 update), 2024

MARKET

# Electric cars are heading for 40% of global sales by 2030

IEA Global EV Outlook 2025, 2030; IEA Global EV Outlook 2025, 2025

40%

Share of global car sales the IEA projects for electric cars in 2030

COMPETITION

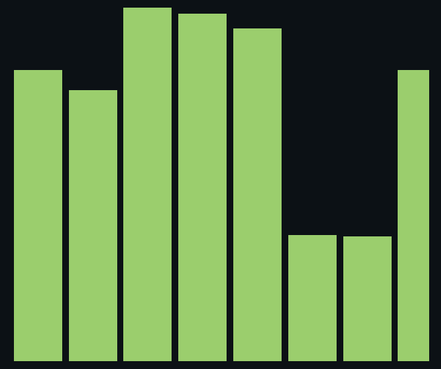

# Rivals and falling prices are squeezing vehicle growth

Falling electric car prices are a factor in China

Storage gives Tesla a second growth engine

THE ASK

# Back Tesla's push to grow *storage* alongside vehicles

Electric demand is rising and competition is intensifying

Storage doubled in 2024 while vehicle deliveries slipped 1%

Tesla (SEC Exhibit 99.1, Q4 2024 update), 2024
